TCNJ student lands internship

College corner

Thursday, July 27, 2006

Adam Jay, a student at The College of New Jersey, is actively seeking to set himself apart from peers, with a similar educational component, by gaining industry experience.

The Edison resident is serving an internship in information technology at World Internet Marketing Inc.

Jay only has to complete this internship before he graduates from TCNJ and enters the work force. He hopes this summer internship will prepare him for what awaits after he gets his diploma.

His primary reason for choosing the internship, he said, was the variety of projects he could be involved with. His focuses in this internship include system and net work administration.

Jay has experience in a variety of operating systems -- Windows, Linux, UNIX and Macintosh -- which is a critical element in his work.

"My primary responsibilities are to make sure critical systems are functioning as they should be and that users have access to appropriate technology resources," Jay said. In the internship, he aims to gain experience in a real-world setting, to make business connections and to network with others.

"This is a place for me to sharpen my skills and expand on my knowledge base," he said.
